

Fabio Ragaini is full Professor of Inorganic Chemistry at Milan University, where he did his complete career, except for a period as a visiting scientist at The Pennsylvania State University, with Prof. G. L. Geoffroy.

He was the Coordinator of the Interdivisional Group of Organometallic Chemistry of the Italian Chemical Society and was chairman of the “XI Congresso Del Gruppo Interdivisionale di Chimica Organometallica (CoGICO2014)”, Milano 2014.

He is the author of 119 papers on scientific journals, a monograph entitled “Catalytic Reductive Carbonylation of Organic Nitro Compounds” (Kluwer Academic Publishers, 1997), 2 book chapters, 147 communications to congresses, and 3 patents. His interests are mainly centered on organometallic chemistry and homogeneous catalysis, with a focus on reduction/carbonylation reactions of nitroarenes.
