

**Stuart Macgregor** is full Professor in the Institute of Chemical Sciences at Heriot-Watt University, Edinburgh. His research uses computational chemistry to model the structure and reactivity of transition metal systems, with a particular focus on C-H and C-F bond activation, sigma-alkane complexes and their applications in homogeneous catalysis and organometallic reactivity in the solid-state. His work is performed in close collaboration with a number of experimentalists. Previously Stuart received his PhD from the University of Edinburgh (1992) and was awarded a NATO Western European Fellowship to work with Odile Eisenstein at the Université de Paris-Sud in Orsay (1992-1994). After two years at the Australian National University he returned to Edinburgh and to take up a lectureship at Heriot-Watt University in 1997. He was promoted to full Professor in 2009 and acted as Head of the Institute of Chemical Sciences from 2010 to 2014. ORCID: 0000-0003-3454-6776
