

**Alberto Credi** (b. 1970) is professor of Chemistry at the Università di Bologna and Associate Research Director at the National Research Council (CNR). He is the Director of the Center for Light Activated Nanostructures (CLAN), a University-CNR joint laboratory for research in the areas of supramolecular chemistry and photochemistry, materials science and nanoscience. His contribution to the realization of logic devices, machines and motors of nanometer size is internationally recognized. He has authored 4 books and over 270 scientific publications (h = 69), he received several prestigious grants and awards, including an ERC Advanced Grant, and he delivered more than 150 invited talks at national and international conferences and seminars. Since the beginning of his career he is engaged in the popularization of chemistry disciplines.
