

Barbara Milani is associate professor of Inorganic Chemistry at the University of Trieste, Italy. Her main research interests deal with organometallic chemistry and homogeneous catalysis, mainly applied to polymerization reactions. She is co-author of 73 publications, 2 books chapters and 7 patents. Current h-index: 26.

Since 2008 she is member of the Advisory Board of Dalton Transactions, and since 2009 of the International Advisory Board of the International Symposium on Homogeneous Catalysis (ISHC).

She is the Coordinator of the PhD School in Chemistry jointly held by University of Trieste and University Ca' Foscari Venezia. She has been the scientist in charge of National and International research grants, including a European Research Training Network with a project entitled: "Atom-economic synthesis using palladium, the chamaleon catalyst". In April 2017 she got the National Abilitation for Full Professor in Inorganic Chemistry
