

**Alceo Macchioni** is Full Professor of General and Inorganic Chemistry at the University of Perugia. His interests include the development of efficient catalysts for the oxidation of water, a key process for the photosynthesis of solar fuels, exploiting organometallics as precursors and the investigation of the structure/activity relationships in organometallic catalysts for olefin polymerization, by means of multinuclear and multidimensional NMR spectroscopy. He is author of more than 177 papers (H-index = 44, total citations > 7400).
