

Fabrizio Cavani received his Ph.D. in Industrial Chemistry in 1987. Then he worked at the Catalysis Centre of EniChem Synthesis, where he discovered the first use of a H-beta zeolite as a catalyst in the petrochemical industry, specifically for benzene alkylation with propylene. In 1990 he was appointed Assistant Professor at Bologna University, where since 2014 is Full Professor of Industrial Chemistry. Currently he is the Coordinator of the Interdivisional Group of Catalysis of the Italian Chemical Society, and Director of the Department of Industrial Chemistry “Toso Montanari” of Bologna University. His research is mainly in the field of heterogeneous and homogeneous catalysis, mainly oriented to application in the chemical industry. He is member of the Advisory board of the journal Green Chemistry (RSC) and of the Editorial Board of ChemSusChem (Wiley VCH).
