

**Max Massi** obtained his PhD in Chemical Science at the University of Bologna in 2005. He then spent three years at Monash University (Melbourne, Australia) as a Postdoctoral Research Associate in the group of Prof. Phil Andrews and Prof. Peter Junk. In 2009 he moved to Curtin University (Perth, Australia) to begin his independent academic career as a Lecturer and he was also awarded an Australian Postdoctoral Fellowship by the ARC. In 2013, he was awarded a Future Fellowship from the ARC.

Max is currently as Associated Professor at the School of Molecular and Life Sciences and member of the Curtin Institute for Functional Materials and Interfaces at Curtin University. The research carried out in Max's group focuses on the synthesis and photophysical investigation of transition metal and lanthanoid coordination or organometallic complexes, including their potential applications in materials and life sciences. He is author of 90 peer-reviewed publications and 5 patents.
